

What do we offer?

We offer monthly Forest Reports, deforestation **Risk Reports** per industry/country and Forest Report **Dashboard** - online software for exploring deforestation data and creating your own reports.

Risk Reports

We have a catalog of affordable monthly reports and we can make customized reports.

Forest Report Dashboard

Access the data and tools behind Forest Report in and create your own reports.

Types of risk reports

We offer both monthly intelligence reports and comprehensive reports. Intelligence reports include monthly top-5 or top-10 assets (e.g. palm mills) while comprehensive reports include all assets in the country (e.g. Ivory Coast protected areas).

Custom Reports

We can help you build a custom report using your data and adjusting the analysis to your needs. Custom reports are built, so you can share them with your clients or publish to your website.

Who is it for?

Forest Report Dashboard is best for large organizations, consultants, and others with custom data/reporting needs.

The FR dashboard is fully customizable. Upload your assets, configured analysis modules to calculate stats from your own land use classification datasets, and create your own forest reports
